

WINDSCREEN REPAIRS

CAN YOU AFFORD TO FAIL YOUR MOT?

REPAIR YOUR CHIPS WITH MC TRUCK & BUS LTD

SAFETY FIRST

A windscreen chip could turn into a crack at any time, often when you are least expecting it. If this happens when you are driving, it could have a serious effect on your safety. That's why it's important to repair a windscreen chip as soon as you spot it.

Your windscreen provides up to 30% of the vehicle's structural strength.

Repairing a chip will result in your windscreen being as strong as before the damage happened.

No matter what damage your windscreen has sustained, whether it is a scratch, a chip or a crack, it is recommended that you have the glass repaired or replaced. Repairs should always be done out of direct sun light.

CHOOSE GENUINE VOLVO WINDSCREENS...

...THE BENEFITS ARE CLEAR!

Genuine Volvo Windscreens have exactly the right dimensions for contributing to the total safety of the cab. Manufactured with two sheets of glass bonded together by a film of laminate ensures that the glass does not shatter in the event of a collision.

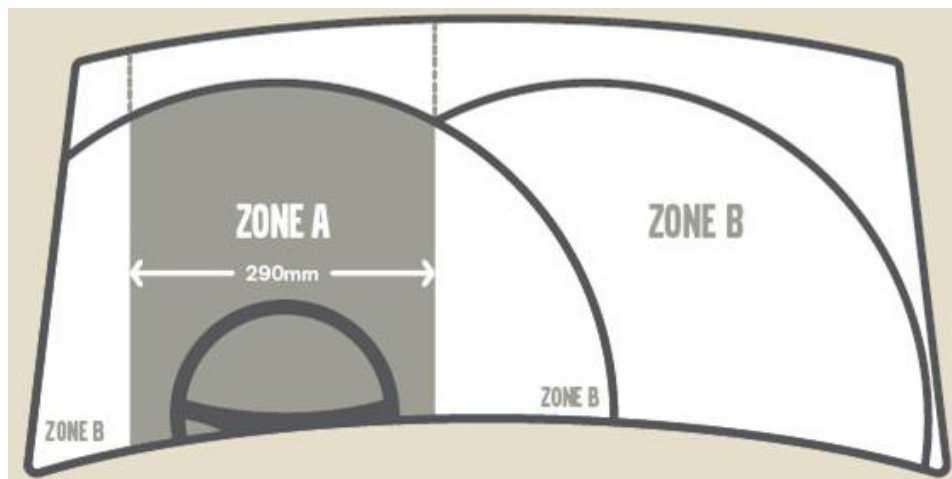

And when fitted by a trained Volvo technician you get more than just a perfect fit:

- Dual-layered glass which meets all known safety norms
- 6.75mm thickness – designed to give the cab the right strength and safety
- Precise curvature eliminates the risk of leakage and contributes to the cab's overall safety structure
- Tested to meet all international safety standards
- Dimensional accuracy ± 2 mm length and ± 1.5 mm height means perfect fit and quick installation

CAN YOU AFFORD TO FAIL YOUR MOT?

A chip in your truck's windscreen can easily make the difference between your truck passing or failing its MOT. If the crack or chip is positioned within the drivers line of vision and is greater than 10mm your truck will fail.

A windscreen with significant scratching that impairs the driver vision will also fail an MOT. Plus the MOT testers manual states "any damage not contained within a circle of 10mm" – so a cluster of minor damage could also risk MOT failure.

ZONE A

Damage larger than 10mm in the drivers line of vision, marked zone 'A' – will fail an MOT.

ZONE B

Damage larger than 40mm in swept area marked zone 'B' – will fail an MOT.

DON'T RISK IT!

We can carry out your repair or replacement quickly and efficiently.
